

Don't bow to the NAB Lobbyist's pressure. The USA stands for free enterprise and open competition. To use the power of government to limit competition is simply un-American. Satellite radio is an important new innovation. Don't use the power of government to stifle innovation and stop competition. To prohibit satellite radio from offering Traffic and Weather, or any other information they wish to deliver, is against the principles of the free market that you are here to protect.

I urge you to soundly reject NAB petition 04-160. Don't stop progress.
